Discreet design that suits everyone

The XTM IF CIC 2.0 is a discreet in-the-ear hearing aid with a high standard of audiological proven technology.

Design meets technology

The IF CIC 2.0 is a small hearing aid which sits inconspicuous in the ear canal. The new 2.0 version is even smaller than its predecessor and continues to impress with new features for better hearing for everyone.

Better hearing with advanced features

We have packed a lot of technology into this small hearing aid to give people with hearing loss a virtually invisible hearing aid that is easy to use and comfortable to wear. The new features are aligned with this goal.

High Resolution SoundPro
Identifies the soundscape out of over 60 scenarios and automatically adjusts the settings accordingly.

Single Mic Directionality
Simultaneously processes input from both hearing aids to give a better spatial awareness.

Dynamic Extender
Better sound quality, overall sounds and especially the louder input sounds are processed differently to minimize distortion.

Colors for an even more discreet fit

Mocha

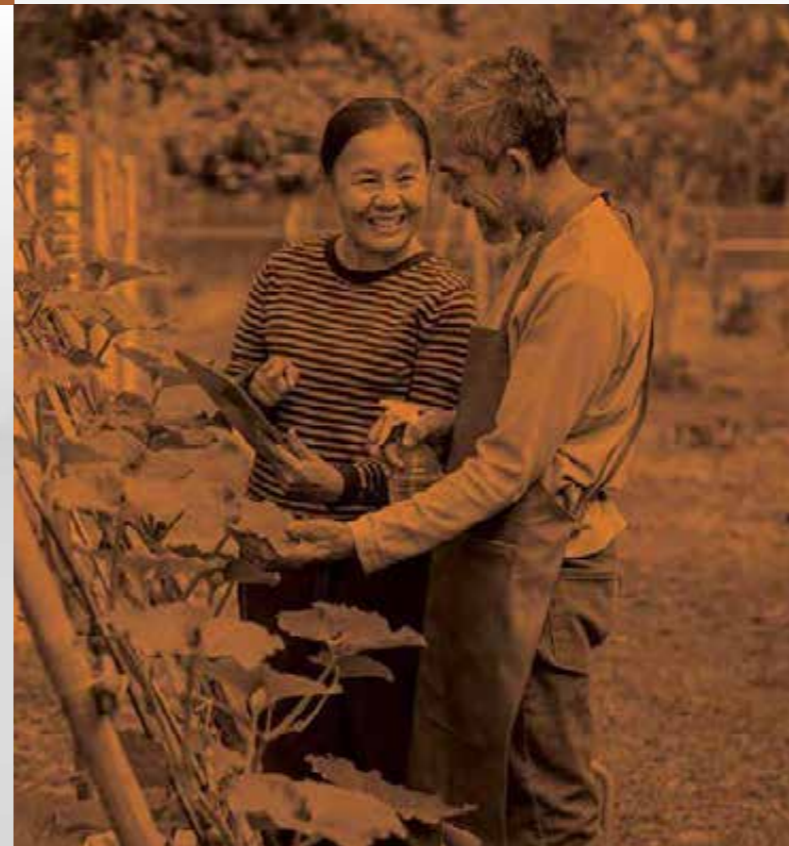

Black

Easy side recognition, blue for the left ear and red for the right ear.

A further advantage of this form factor is the preservation of the pinna. As the hearing aid sits inside the ear canal the function of the outer ear to localize sounds is still effective which brings a more natural hearing experience and a high spontaneous acceptance rate.

Easy access for customized settings

The myRemote app enables easy control of default settings such as program selection and volume via smartphone.

Relative Size to iPhone 16
